2. Paint defect caused by installation, improper user treatment, physical impacts and damages, corrosion from environment and chemicals.
3. Warranty filed by non-original owner.
4. Wheels do not meet the fitment guidance.
5. Wheels with a previous history of repair, powder coating and other refinishes.
6. Wheels were used with accessories did not follow the guidance.
7. Wheels were installed on vehicle which modified to a different suspension geometry compared to factory spec.

Wheel Maintenance:

Proper maintenance is required to keep the wheel finish in good condition. An improper treatment will result in peeling of clear coat and corrosion, to prevent your warranty being voided, following measures shall be considered:

1. Avoid sudden temperature change on your wheels, an extreme change in temperature on your wheel will cause disfigurement and unrepairable damages.
2. Wheels are specially machined/finished are not recommend for winter use. Snow Melter, salt and extreme humidity will speed the process of corrosion.
3. Wash your wheels on a weekly basis with non-detergent soap and water, using a soft brush or Sponge. Removing salt, dirt and brake dust will avoid corrosion and maintain the finish.
